Art Unit: 1746

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-6 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,938,625 to Stalp, in view of Oxley et al. (U. S. Pat. No. 5,720,670), Hanser (U. S. Pat. No. 4,597,584) or Thomas (U.S. Pat. No. 5,524,318). Re claim 1-6, the claims of U. S. Pat. No. 6,938,625 disclose all of the claims subject matter with the exception of the programmable microcomputer system. To employ such is of little patentable weight in that it is old and well known to employ microprocessors to automate various mechanical/electrical components (See MPEP 2144.03 **Reliance on Common Knowledge in the Art or "Well Known" Prior Art**). Nonetheless, the patents to Oxley (col. 2, line 66 thru col. 3, line 13), Hanser (col. 4, lines 40-55) and Thomas (col. 5, lines 22-41) disclose that it is old and well known to employ programmable microcomputer to control hydraulic

cylinders. It therefore would have been obvious to one having ordinary skill in the art to modify the arrangement of the Stalp'625 patent, to have the cylinder controlled by a programmable microcomputer, since this is old and well known as taught by Oxley, Hanser or Thomas, for the purpose of removing active human involvement.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In Benilan, Keller, Rodenburg et al., Bishop and Rowan, note the cylinders and/or control means.
